Ex. No: 12	BUILD WEB APP WITH FLUTTER
Date of Exercise	29.09.2026
Git-Hub Host Link	

Aim:

To develop, run, and build a responsive Flutter application for the Web using Flutter and Chrome.

Description:

This experiment demonstrates how a Flutter allows developers to create web applications using the same Flutter framework used for mobile applications. In this experiment, a Flutter Web application is created and executed in Chrome. A responsive layout is implemented using LayoutBuilder so that the interface changes based on the browser window width. Finally, a production web build is generated using flutter build web.

Procedure:

Step 1: Check the Flutter installation and development environment using: flutter doctor

Step 2: Check the available devices and verify that Chrome or another web browser is available using: flutter devices

Step 3: Create a new Flutter web application using: flutter create flutter_web_app

Step 4: Navigate to the application directory using: cd flutter_web_app

Step 5: Open the Flutter project in VS Code using: code .

Step 6: Create the web interface in lib/main.dart using Scaffold, AppBar, and ElevatedButton.

Step 7: Implement a responsive layout using LayoutBuilder to display different layouts for mobile and desktop screen widths.

Step 8: Run the Flutter web application in Chrome using: flutter run -d chrome

Step 9: Resize the Chrome browser window and verify that the application changes between the Mobile Web Layout and Desktop Web Layout.

Step 10: Create the production web build using: flutter build web and verify that the generated files are available in the build/web/ directory

Program:

```
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}

const Color primaryColor = Color(0xFF6558E8);
const Color backgroundColor = Color(0xFFF6F7FC);

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      debugShowCheckedModeBanner: false,
      title: 'Flutter Web Application',
      theme: ThemeData(
        useMaterial3: true,
        scaffoldBackgroundColor: backgroundColor,
        colorScheme: ColorScheme.fromSeed(
          seedColor: primaryColor,
        ),
        fontFamily: 'Arial',
      ),
      home: const DashboardPage(),
    );
  }
}

class DashboardPage extends StatelessWidget {
  const DashboardPage({super.key});

  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        backgroundColor: Colors.white,
        surfaceTintColor: Colors.white,
        elevation: 0,
        title: const Row(
          mainAxisSize: MainAxisSize.min,
          children: [
            Icon(Icons.bolt, color: primaryColor, size: 30),
            SizedBox(width: 8),
            Text(
              'FlutterSpace',
```

```
          style: TextStyle(
            fontWeight: FontWeight.bold,
            color: Color(0xFF252542),
          ),
        ),
      ],
    ),
    actions: [
      IconButton(
        onPressed: () {},
        icon: const Icon(Icons.notifications_none),

          ),
        ),
      ],
    ),
  );
}
```

Output:

RESULT

A responsive Flutter Web application was successfully developed, executed in Chrome, tested with different screen sizes, and built for production.
